

Figure 1 consists of 12 sub-graphs, labeled (a) through (l), each showing the time course of a different physiological or behavioral parameter over a 10-minute period. The y-axis for all graphs ranges from 0 to 100, and the x-axis ranges from 0 to 10 minutes. The graphs show a general increase in the parameters during the intervention period, with some parameters showing a more pronounced increase than others.

- (a) Heart rate (b/min): Shows a steady increase from approximately 60 to 80 b/min.
- (b) Blood pressure (mmHg): Shows a steady increase from approximately 120 to 140 mmHg.
- (c) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (d) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (e) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (f) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (g) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (h) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (i) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (j) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (k) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
- (l) Blood flow (ml/min): Shows a steady increase from approximately 20 to 40 ml/min.
